## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over XP-002161407 (Rogowin S.A.). Rogowin S.A. teaches that it is known that bleached cellulose exhibits discoloration and decomposition at high temperatures due to the presence of carboxyl groups. This problem is present regardless what type of bleached cellulose is used or whether a particular solvent is possibly decomposed with the cellulose. This decomposition would occur whether the cellulose is heated in the dry state or in a solution. The use of cellulose with a particular carboxyl group is arbitrary and within the purview of one of ordinary skill in the art. A person of ordinary skill addressing the problem of reducing cellulose decomposition would directly deduce from Rogowin S.A. that the carboxyl group content of cellulose must be as low as possible. It would have been obvious to one of ordinary skill in the art that this could be accomplished by either blocking the carboxyl groups as shown by Rogowin S. A. or keeping the carboxyl content as low as possible in the starting material. It progresses therefrom that decomposition will be lower when the carboxyl group content is low. In addition, the level of the carboxyl content in the product does not have a structural

impact, but merely affects the level of discoloration and the amount of discoloration that is acceptable is a choice for one of ordinary skill in the art.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References WO 97/23666 and European Patent Publication 047929 are cited for showing basic knowledge of one of ordinary skill in the art in regard to carboxyl group content of bleached cellulose.
